

GROUNDHAWK: FULL-SERVICE UTILITY LOCATION EXPERTS

GroundHawk is a trusted subsurface utility location partner for contractors, facility managers and municipalities across the Southeast. Our technicians are trained to deliver an accurate analysis and inventory of everything underground to ensure our clients can build and dig with confidence.

The GroundHawk team provides full-service utility location, utility mapping and analysis, subsurface utility engineering, and a variety of auxiliary services in order to provide our clients with the subterranean intelligence necessary to avoid the costly service interruptions, long lead times, and serious injuries which often result from uninformed digging.

WHAT CAN I EXPECT WITH GROUNDHAWK?

The one-call system, also known as 811, is responsible for marking all publicly-owned utilities but will not typically mark any privately-owned utilities. This is why the GroundHawk team is dedicated to providing our private clients with accurate data, clear and readable mapping and analysis, and quick project turnaround. Our clients can expect industry-leading professional service and actionable insight made possible with our state-of-the-art technology and more than 40 years of industry experience.

SAFETY FIRST!

Uninformed digging can result in severe injury and is entirely avoidable with our inventory reports.

TIME AND COST SAVINGS

Over 350,000 costly, unnecessary, and avoidable service interruptions occur every year due to uninformed digging

ACCURATE DATA

Our reports and analyses are complete, accurate, and designed to be easily understandable no matter the client's institutional knowledge.

PROFESSIONAL TEAM

With decades of experience, our team is always knowledgeable, friendly, and discrete from initial contact through project closeout.
